Health · agentic clinical intelligence

Pre-seed · AI & Health

getepi.app · Liverpool, UK
chris@codenutri.com

No one should have to manage a serious condition alone.

EPI Health is a team of intelligent agents working behind one trusted companion — designed to stay with patients every day, not just on consultation day.

THE PROBLEM

Care stops at the consultation door

People with chronic and autoimmune conditions are seen for minutes, then left to self-manage complex plans for months. Adherence slips, warning signs are caught late, and clinicians have no view between visits.

15M

people in England with a long-term condition

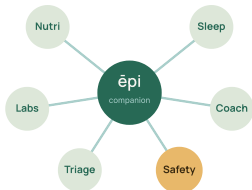

~1 in 10

UK adults affected by IBS alone

30-50%

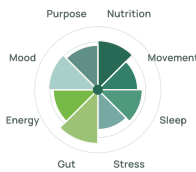

do not adhere to long-term treatment

AGENTIC SYSTEM

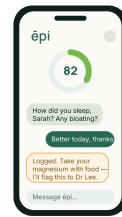

One companion, many specialist agents — with a safety guardrail on every reply.

WHEEL OF LIFE

A whole-person view across health dimensions — scored, tracked and acted on over time.

PATIENT APP

Daily check-ins and gentle nudges — with clinician escalation when it matters.

WHY IT IS DEFENSIBLE

01

Safety, by architecture

Real-time red-flag escalation to humans, consent-gated data, response screening and tamper-evident audit logging — built into the core, not bolted on.

02

Clinical method, not a chatbot

Reasoning structured by our Functional Health Matrix, designed by a practising clinician, so the system thinks like a good practitioner.

03

Hard to replicate

Needs three scarce things at once: deep clinical method, a regulated safety spine, and the engineering to run them together.

BUSINESS MODEL

Multiple revenue points per patient

- Patient subscriptions recurring consumer engine
- Dispensary & supplements **monthly reorders** · high margin
- Practitioner subscriptions low-CAC acquisition
- Consultation fees platform take-rate

High lifetime value against a low, practitioner-assisted acquisition cost. Enterprise & health-system contracts follow the clinical evidence.

TRACTION & READINESS

Built, compliant, validation-ready · TRL 4-5

- Working multi-agent platform** on Google Cloud Vertex AI, built solo, without external capital.
- BAA signed** (Mar 2026) for compliant handling of sensitive health data; UK data residency.
- Patient app live** at getepi.app, with full safety & audit spine.
- Pilot protocol designed** — AI-supported IBS self-management, ready to run.

TECH FOR GOOD — THE OUTCOMES WE WILL MEASURE

Adherence

patients kept on protocol between visits

Earlier

warning signs escalated to clinicians sooner

Time saved

less manual, unscalable clinician follow-up

Zero

serious safety incidents — a hard bar

£500k

PRE-SEED · SAFE / CONVERTIBLE

We are raising to fund our **first clinical pilot**, two key hires (**clinical safety lead + senior engineer**), and ~18 months of runway — reaching real-world evidence, first paying users, and the dispensary revenue engine switched on. Open to structure; cap to be agreed with our lead. We want partners who bring clinical, regulatory or healthtech value alongside capital.
